Gain control with our integrated shop management software

**Windward's Outdoor Power Equipment Edition is a powerful integrated software system that includes Point of Sale, Inventory Control, and Accounting.**

**Windward System Five - OPE Edition** is a complete business management solution for single and multi-store businesses. Windward is optimized for lawn and garden equipment centers, heavy equipment sales and service, small engine shops, and many others.

You're different than the automotive business and unlike many other products, this has been designed specifically for your industry. You have enough things to worry about, why try to run your business on software designed for a different market altogether?

**While Windward System Five - OPE Edition has many features that make it an exceptional program, the following is the foundation of the system:**

#### **Set up and use easily**

You can set up Windward quickly and tailor it to meet your specific needs. With access to expert support and assistance, you can have a complete retail management system up and running in no time.

#### **Track and manage inventory efficiently**

Windward eliminates the need to conduct inefficient, manual stock counts, so you save time and reduce employee overhead.

#### **Stay on top of trends**

Monitor buying patterns more efficiently and make better decisions when ordering, buying, and pricing.

#### **Flexible tracking system**

You can track and manage items across your business using any inventory method, including services, layaways, work orders, and back orders. Compatible inventory types include standard, serialized, kit, matrix, and non-inventory.

#### **Streamline point-of-sale processes**

Think of the advantages your business can realize with a system that automates your in-store transaction processes and integrates POS transactions with a built in accounting package.

#### **Instant information access**

Your associates work with a customizable point-of-sale screen that enables them to check prices, availability, and stock location instantly. They'll be able to access complete customer information and quickly process returns, back orders, sales quotes, work orders, and layaways.

#### **Minimal hardware requirements**

All you need is a Windows-based computing device that accommodates Windows 2000® or later. It can also utilize many common point-of-sale devices such as printers, bar-code readers, magnetic-strip readers, and cash drawers. It works with notebook and Tablet PCs as well as various PDA, mobile, and wireless devices.

**Real World Solutions for the OPE Industry - designed in consultation with real business owners, to fit in with the way businesses really operate.**

#### **What our customers are raving about:**

- ▶ Unlimited price files, no subscription to Windward required
- ▶ Windows® based, works with 95%+ of off the shelf computer hardware and point-of-sale devices, Windows XP and Vista
- ▶ Form designer creates your custom forms - no pre-printing necessary
- ▶ Integration to industry leader "PartSmart" for diagrams and part listings
- ▶ Floor planning with "purchased from" & "payable to" capability - also complete reporting of in stock and sold items
- ▶ Extensive serialized item tracking
- ▶ Part returns for warranty or return merchandise authorizations
- ▶ Full XML support e-commerce integration
- ▶ Labor tracking and shop supplies
- ▶ Fax or email directly from the software - estimates, work-orders, purchase orders, even statements
- ▶ Print most documents, including invoices, in internet standard PDF format
- ▶ No monthly contract, support is purchased as required, and low annual update fees
- ▶ Simple conversion utilities to import customers, vendors, and inventory. Including custom Quickbook® imports.
- ▶ Stand Alone mode for doing offsite sales which merge back into the main system
- ▶ Fully integrated one-write real time system, no batch accounting, or dual entry
- ▶ Extensive security and audit trails, with the ability to edit completed invoices to correct mistakes
- ▶ Pervasive database is included.
- ▶ ODBC and SQL database means the ability to get extensive customizable reports directly from System Five or with a third party report writer if necessary. SQL allows for dynamic reports or lookups by multiple search options, including looking up a customer by name, city, phone, license #, state/province or any combination of these, plus more
- ▶ Non-proprietary system easily imports and exports data into most windows formats including mail merging directly into MS Word
